OUTLAYS BY FUNCTION

Outlays occur when the Government pays its obligations, whether with cash, check or electronic funds transfer. Total outlays were \$1,863.9 billion in fiscal 2001, an increase of \$75.8 billion or 4.2 percent over the amount from fiscal 2000. The text below shows how outlays were divided in fiscal 2001. The seven largest categories of outlays are detailed below. These seven categories correspond directly to the Government's functional classification system.

The functional classification system groups Government activities—budget authority and outlays, loan guarantees and tax expenditures—into categories that reflect the national need addressed by each transaction. The system identifies 17 broad categories that address national needs. This provides a coherent and comprehensive basis for analyzing and understanding the budget. Two additional categories—interest and undistributed offsetting receipts—do not address specific national needs but are included to cover the entire budget. Under the functional classification system, each outlay is assigned to a classification that best defines its most important purpose, even though the outlay may serve more than one purpose.

The table that follows shows fiscal 2001 and fiscal 2000 outlays for each functional classification. It also shows the amount and percentage change in outlay levels between these 2 fiscal years. Changes in outlays for the largest functional classifications are discussed briefly below.

- National defense—This function includes those activities directly related to the defense and security of the United States. This amount encompasses Government spending for conventional forces, strategic forces, atomic energy defense activities and other defense related activities. National defense outlays for fiscal 2001 increased by \$9.98 billion, to \$304.5 billion.
- Education, training, employment and social services—These programs assist citizens in developing and learning skills to expand their potential opportunities and job placement possibilities. Outlays for this function were \$62.9 billion for fiscal 2001, an increase of 7.3 percent or \$4.3 billion from fiscal 2000 outlays.
- Health—The Federal Government helps meet the nation's health care needs by financing and providing health care services, aiding disease prevention, and supporting research and training. Outlays for this function were \$171.9 billion in fiscal 2001. This represents an increase of \$17.5 billion over the prior fiscal year.
- Medicare—Through Medicare, the Federal Government contributes to the health and well being of aged and disabled Americans. Outlays for this function were \$217.4 billion in fiscal 2001. That is an increase of 10.3 percent or \$20.3 billion over fiscal 2000 outlays.
- Income security—Income security benefits are paid to the aged, the disabled, the unemployed and low-income families. Included within this classification are programs such as general
 retirement and disability, public assistance and unemployment compensation. Outlays for these benefits were \$263.3 billion in fiscal 2001—an increase of 6.2 percent, or \$15.3 billion, over the
 fiscal 2000 level.
- Social security—Through social security, the Federal Government contributes to the income security of aged and disabled Americans. This function's outlays were \$433.0 billion for fiscal 2001. That represents an increase of 5.7 percent or \$23.5 billion over fiscal 2000 outlays.
- Interest—This function includes interest paid by the Federal Government offset by interest collections from the public and interest received by Government trust funds. Net interest outlays are
 very sensitive to both interest rates and the amount of debt outstanding. Net interest outlays decreased in fiscal 2001 to \$206.2 billion. This is a 7.6 percent decrease from the prior fiscal year.
