

## Enable Transport Layer Security (TLS)

To enable TLS 1.2, complete the following steps:

1. Click the **Internet Explorer** icon to open the web-browser.

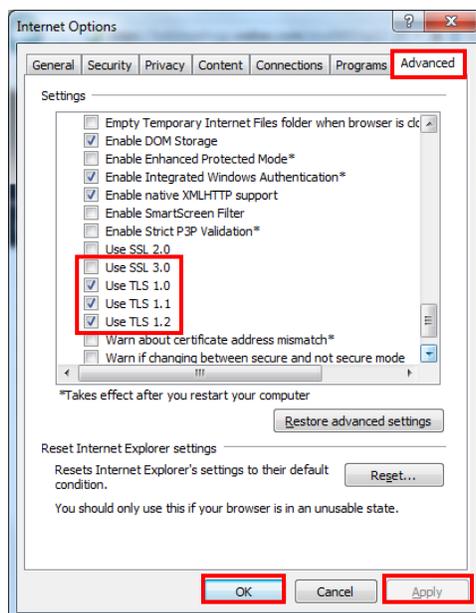

2. Click **Tools** and click **Internet Options**. The **Internet Options** dialog box appears.

3. Click the **Advanced** tab, and scroll down to **Security** until **Use TLS 1.2** appears. Click **Use TLS 1.2**.

**Note:** This graphic is for illustrative purposes only. All TLS options do not need to be enabled. Additionally, SSL 3.0 does not need to be disabled.

4. Click **Apply** and then click **OK** to enable the new setting.
